Project Development Phase Document

System Environment: SystemUI&ClientScriptsEnvironment
Target Table: Incident [incident]
Scope: Global Application Workspace

1. Development Phase Executive Summary

This document formalizes the active technical implementation and code bases compiled during the development execution segment of the ServiceNow Incident Management configuration project. Development transitions conceptual structural requirements directly into running system artifacts. By layering declarative system UI triggers against client-side script modules, the platform natively ensures record fields validate flawlessly prior to database storage operations.

2. Declarative UI Configurations (Task 1 & Task 2)

Before deploying custom script architectures, core structural requirements are enforced via declarative ServiceNow configurations. This establishes primary UI behavior with minimum browser processing overhead.

2.1 Baseline UI Policy Parameter Map

Parameter Field	Target Configuration Specification
UI Policy Name	High Impact Control
Target Environment Table	Incident [incident]
Active State	True (Enforced globally)
Condition Rule Schema	Impact [impact] **is** 1 - High
Global Scope Strategy	Checked (Applies to all related form frames)
On Load Execution Strategy	Checked (Runs during browser window initialization)
Reverse if False Paradigm	True (Dynamically undoes modifications if severity flags drop)

2.2 UI Policy Target Field Action

Target Field Label	Mandatory Flag Setting	Read-Only Flag Setting

This is for informational purposes only. For medical advice or diagnosis, consult a professional. AI responses may include mistakes.

3. Custom Procedural Code Development

3.1 Dynamic Field Mapping Script (Task 3: onChange Script)

```
functiononChange(control, oldValue, newValue, isLoading) {
    if (isLoading || newValue == '') {
        return;
    }

    if (newValue == '1') {
        g_form.setValue('urgency', '1');
        g_form.addInfoMessage('Urgency set to High for High impact incident.');
    }
}
```

3.2 Submission Transaction Guardrail (Task 4: onSubmit Script)

```
function onSubmit() {

    if (g_form.getValue('impact') == '1' && g_form.getValue('assigned_to') == '') {
        g_form.showErrorBox(
            'assigned_to',
            'Assigned To is mandatory for High impact incidents.'
        );
        return false;
    }
    return true;
}
```

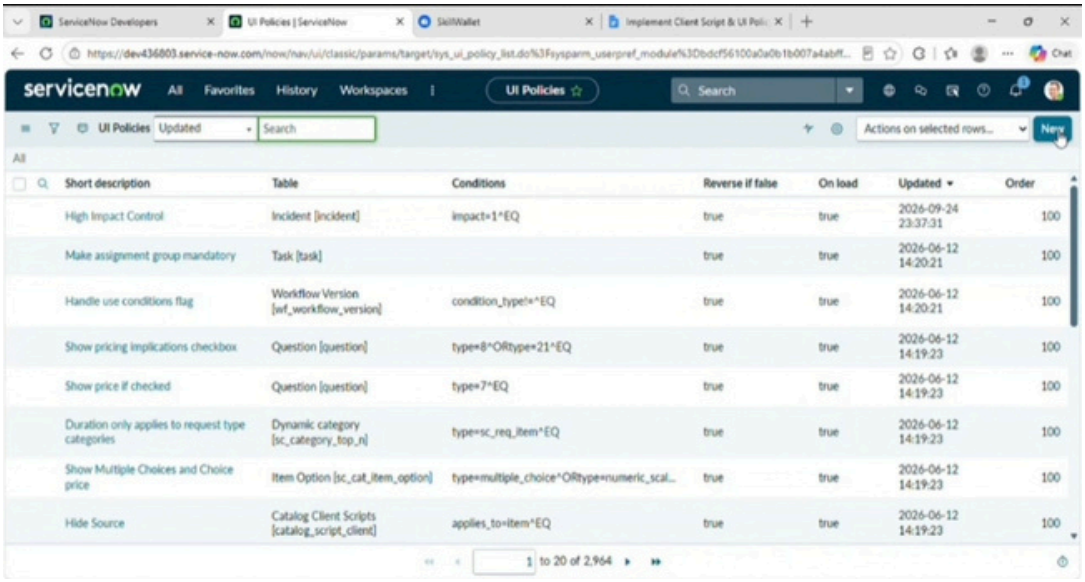

This is for informational purposes only. For medical advice or diagnosis, consult a professional. AI responses may include mistakes.

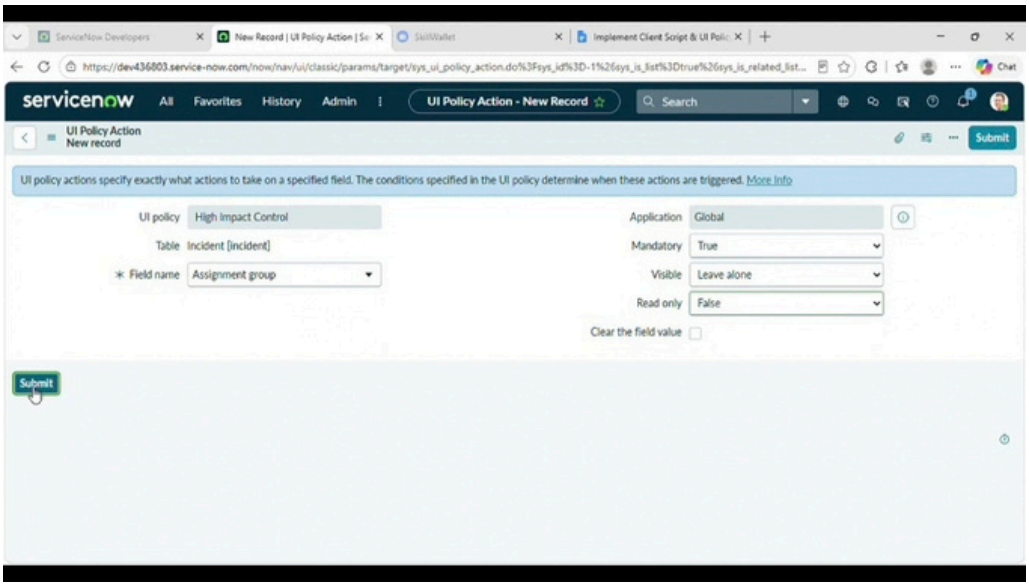

3.3 Inline Row Manipulation Safeguard (Task 5: onCellEdit Script)

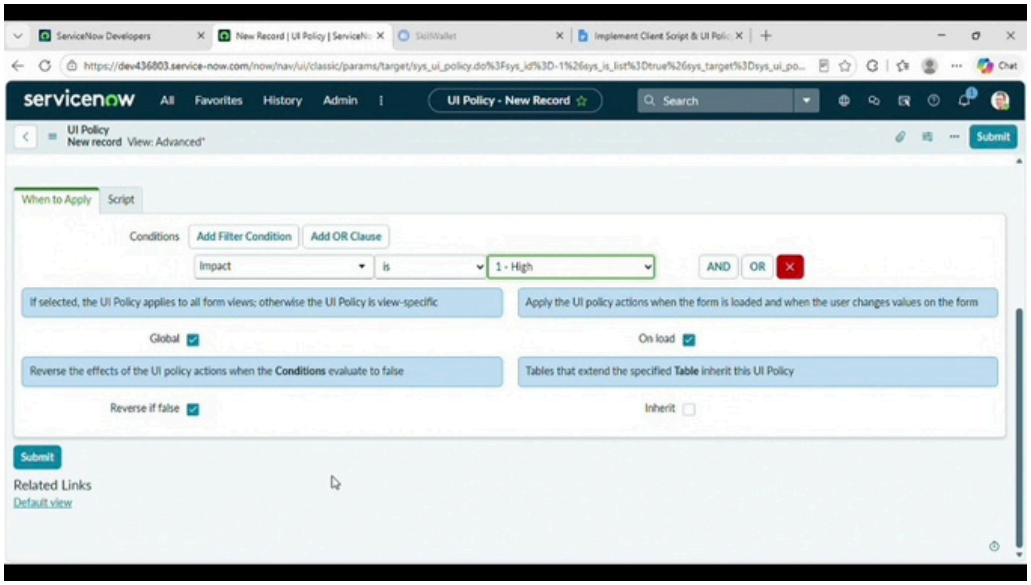

```
function onCellEdit(sysIDs, table, oldValues, newValue, callback) {

    alert('State cannot be updated using list editing. Please open the Incident.');
    callback(false);
}
```

This is for informational purposes only. For medical advice or diagnosis, consult a professional. AI responses may include mistakes.
